Tasks and responsibilities

Wood industry specialists operate and maintain state-of-the-art cutting and conveyor systems. They use these to process, dry and store the logs delivered from the forest. They use it to produce boards, squared timber and battens. As a wood industry specialist, you calculate quantities, yields, machine hours and prices. You will also advise customers on the selection of sawn timber.

Development opportunities

- Work in a sawmill and planing mill as a highly qualified wood industry specialist with a federal certificate of competence
- Specialization with courses from technical and vocational schools, industry associations, the Bern University of Applied Sciences for Architecture, Wood and Construction
- Follow-up training to become a wood specialist with a federal certificate of competence
- With vocational baccalaureate during or after basic training: Further training to become a qualified technician specializing in the wood industry at a higher technical college
- With a vocational baccalaureate during or after basic training: Bachelor of Science (FH) in wood technology at a university of applied sciences
