Silo height:	14,15m
Total height:	6,85 x 17,30m
Passage width:	5,25m
Total height:	4,20m

Project description

With its Eternit façade, this double module silo was optically integrated into the existing building structure. The special steel substructure with recessed supports is equipped with strain gauges. The system is fully automatic. This means that you need to register with an ID chip to purchase salt. An evaluation of the individual purchases is possible by means of weighing and integration into the "Salzmanager" merchandise management program.
