Free Form pavilion ‘Into the woods’

Copenhagen, DK

Project details

Architecture	JAJA Architects
Project type	Art and culture
Construction type	Free Form
Services	Timber construction
Construction	2021
Locality	Kopenhagen
Country	Denmark

Timber pavilion for 3 Days of Design

The ‘Into the woods’ pavilion was at the heart of an exhibition in the garden of the Swiss Embassy in Copenhagen during the 3 Days of Design event and is a joint project by MDT-Tex, JAJA Architects and Blumer Lehmann.

‘Into the woods’ consists of three identical and structurally independent tree structures that connect to form a covered space. The design was inspired by connecting treetops from an aerial perspective. Each tree in the support structure is formed from 18 timber ribs. The entire structure is covered with a water-repellent textile membrane. A steel tube in the centre of each shade serves for drainage and provides the necessary stability.

The timber pavilion can be installed as a temporary or permanent design feature in gardens or public spaces.

Free Form pavilion ‘Into the woods’

Copenhagen, DK

The three support structures grow together to form the roof.

Each tree of the support structure consists of 18 parts.

The ‘Into the woods’ pavilion provides a space to meet in inspiring surroundings.

The support structures consist of laminated veneer timber panels that have been milled and arranged in a circle around the steel girder.

Copenhagen, DK

The pavilion is covered with a textile membrane.

Hardwood dowels form the main connection between the vertical posts and horizontal beams.

The timber pavilion in the garden of the Swiss Embassy was open to the public.
