Harmonious shopping experience

We were given the opportunity to plan, co-ordinate and implement the Landi store in Gossau as part of a joint GC contract. As the general contractor, we were responsible for the building shell, including the roof, facade, doors, gates and windows. We planned, coordinated and supported the remaining implementation work in accordance with the construction management brief, such as ordinary construction work, interior work and building services engineering.

The result is a single-storey timber construction with three gable roofs and a wooden facade made from pre-aged rough-cut spruce slats. A dyed wind paper behind the vertical slats creates a green shimmer effect. Another striking feature is the 3D Landi logo that we have integrated into the facade battens. The logo was milled on our CNC machine. The building provides a floor area of approximately 1,760 m².
