

Timber modular construction for kindergarten

Boudry, CH

Project details

Client	Gemeinde Boudry
Project type	Education and research
Construction type	Modular construction
Services	JC
Construction	2018
Locality	Boudry
Country	Switzerland

Modular construction creates space for wraparound childcare

The new modular school building was Boudry's response to an urgent need among the local population. With a floor area of 600 m², the building provides space for the extracurricular supervision of 70 children. The project also includes a multifunctional sports ground and additional parking. The L-shaped structure comprises 12 large modules and seven smaller ones, some of which are fitted with double heat storage layers and acoustic panelled ceilings. The building conforms to the Minergie-P standard, with the timber construction creating a natural, pleasant indoor climate.
