Architecture	Blumer-Lehmann AG
Project type	Education and research, Temporary buildings
Construction type	Modular construction
Services	General contractor services (GC)
Construction	2014
Locality	St. Gallen
Country	Switzerland

Long-term temporary extension bridges the gap with seminar and group rooms

In 2013, the extension for the University of St. Gallen was in the planning and production phase. To ensure that studies could still take place smoothly until completion of the building work, we constructed a temporary building.

The three-storey construction was built in February 2014. It is designed to be used for a provisional period of 10 years. The temporary building accommodates 10 seminar rooms and 16 group rooms over a total floor area of 2,040 m². We built the shell within three months.
