T-Express

Everland Resort, KR

Project details

Project type	Leisure and sport
Construction type	Free Form
Services	Timber construction
Construction	2012
Locality	Everland Resort
Country	South Korea

At full speed

We produced the timber roller coaster in Korea in 2012. The technically demanding project has challenged us anew every two years since it was built in 2007. At each two-year interval, we inspect and service all structural components and connections. To date, we've been delighted to discover that the construction is extremely durable. The three-day maintenance work not only requires expert knowledge but climbing skills and a head for heights.
